

EDITORIAL

Dear Readers,

This is the second issue of *Catalysis in Green Chemistry and Engineering* (CGCE). The first issue contained a few of the papers that were presented at the Seventh Asia Pacific Congress on Catalysis (APCAT-7) from January 17–21, 2017, in Mumbai, India. *Catalysis for Sustainable Development, Peace and Prosperity* was the theme for this event. APCAT is an international conference attended by renowned scientists, academicians, and delegates from all countries but mainly from the Asia-Pacific Region. APCAT-7 witnessed participation of over 500 delegates from 30 countries. Presentations at the conference included 175 oral, 115 posters, 30 invited lectures and plenary, and keynote speakers.

A total of 45 papers that were presented at the conference went through a rigorous peer review process before choosing 18 papers for publication in CGCE. CGCE Volume 1, Issue 2 includes the second set of these papers which mostly cover the work being done on catalysts synthesis and characterization and their applications for various reactions.

We thank Begell House Publishers, particularly Dr. Yelena Shafeyeva, President, Begell House Inc. and the publishing and production teams for their assistance in preparation and publication.

We request that you submit manuscripts to Begell House Online Submission site. For submission guidelines please go to <https://submission.begellhouse.com/usr/login.html?prod.code=journals>, at the top of the screen click Authors Hub.
