NANOMECHANICS SCIENCE & TECHNOLOGY
An International Journal

VOLUME 2

adsorption, 323
amine hardener, 167
amorphous-crystalline thin films, 61, 71
atomic displacements, 91

boundary-volume problem, 255
Brownian motion, 39

carbon nanotube, 185, 295
chemical synthesis, 185
coated composites, 231
cobalt, 1, 85
composite nanoparticles, 9
composite, 255
condensation, 61, 71
critical buckling temperature, 295
curing, 167

diffusion, 55
dispersed phase, 145
dispersely filled elastomer composite, 349

effective properties of composite, 255
elasticity theory, 255
elasticity, 133
elastomer matrices, 185
electrorheologigal suspension, 145
energy of elastic deformation, 55, 347
epoxy resin, 167
epoxy polymer, 323
eutectic, 61, 71
experiment, 167

feed of plants, 309
fibrillous structure, 145
filling, 185
finite deformations, 133
finite-volume method, 275
filler, 323
formation, 9
fractal assessments, 185
fractal parameters, 217

germanium chalcogenides, 61, 71

heat conduction, 39

interaction, 9
interphase interactions, 217
interphase layer, 323, 347
irradiation, 91

kinetic model, 167

laminated silicate nanofiller, 133
large deformations, 347
lid-driven, 275

macromechanical characteristics, 217
mechanics of nonhomogeneous media, 231
mesodynamics, 105
method of periodic components, 255
method of the Green functions, 255
mixed convection, 275
modeling, 205
molecular friction, 323
molecular dynamics, 9, 105
multilevel modeling, 309

nanoaerosols, 105, 205, 309,
nanocomposite, 133
nanocrystallites, 61, 71
nanofluid, 39, 275
nano-range, 91
nano-size disperse fillers, 217
nanosized interlayers, 1, 85
nanostructure, 133
nonlocal continuum mechanics, 295
numerical simulation, 231

particle migration, 39
plasticity, 133
polymer composites, 217
polymer, 133

quantum mechanics, 105
quantum-mechanical approximation, 145
quantum-mechanical calculations, 185
quantum-mechanical modeling, 323
quasiperiodic structure, 255

reinforcement effect, 185
reinforcement, 217
relaxation, 55
self-consistent scheme, 255
self-oscillations, 91
shear modulus, 1, 85
simulation by first principles, 1, 85
simulation, 105
small-scale coefficient, 295
solid-phase reaction, 55
strain rate, 231
strength properties, 185
strength, 1, 85
structural model, 347
structure, 9
suppression of fires, 205
surface modification, 323

thermophoresis, 39
tungsten carbide, 1, 85
two-layer film nanostructure, 55

vacancies, 91
viscosity, 167

yield stress, 347
