

NANOMECHANICS SCIENCE AND TECHNOLOGY

An International Journal

Volume 1, 2010

A

adhesion, 223, 301
AFM, 187
asymmetry effect, 49, 99

B

Brownian motion, 257

C

capillary, 49, 99
carbon nanotubes, 1, 127, 247, 327
composite materials, 273
composites, 291
computational mechanics, 301
Couette and Poiseuille
flows, 151
Couette flow, 169

D

deformation, 273
destruction, 273
diffusion pressure effect, 49, 99
diffusion slip, 49, 99
dusty-gas model, 49, 99

E

effective characteristics, 301
elastic moduli, 345

F

face-centered cubic lattice, 169

G

gas mixture flow, 49, 99
gas mixture separation, 49, 99
granular composite, 345

H

heat conduction, 257
hydrogen storage, 327

I

interfacial adhesion, 31
interphase layer, 211
interphase, 223

K

kinetic theory of gases, 49, 99
Knudsen regime, 49, 99

M

mechanical characteristics, 31
mechanical chemistry, 127
mechanical properties, 1, 291
modeling, 211
moduli, 1
molecular dynamic simulation, 169, 247
molecular dynamics, 313
molecular friction, 127
molecular indicators, 31

N

nanoadhesion, 31

nanochannel, 151, 169
nanocomposite, 31, 127, 187, 211
nanofiller, 291
nanoflow in a carbon nanotube, 313
nanofluids, 257
nanoindentation, 187, 291
nanoparticles, 187
nanostructured materials, 291
non-equilibrium thermodynamics, 49, 99
numerical integration, 223

O

organoclay, 31

P

particle migration, 257
phase interface, 127
physical adsorption, 327
polymer composite, 301
porous material, 345
porous media, 49, 99
probability of microdestruction, 273
properties, 211

Q

quantum-chemical
and quantum-mechanical modeling, 127
quantum-mechanical calculations, 1
quantum-mechanical modeling, 327

R

reliability, 273

S

scale factor, 187
sieve effect, 49, 99, 291
SPC/E model, 247
statistical modeling, 273
stochastic structure, 273
strength properties, 127
strength, 1, 187
stress-strain state, 127
structure of composites, 187
structure, 1, 31
surface diffusion, 49, 99
surface fluxes, 49, 99
surface forces, 49, 99
surface modification, 127

T

thermal slip, 49, 99
thermomolecular pressure drop, 49, 99
thermophoresis, 257
transverse elastic modulus, 223
two-phase medium, 151

U

unidirectional composites, 223

V

viscous slip, 49, 99
volume of averaging, 345

W

water molecules, 247
