International Journal of
Multiscale Computational Engineering

Volume 7 **ISBN 1091-028X** **2009**

CONTENTS OF VOLUME 7

NUMBER 1

SPECIAL SECTION:

PAPERS FROM THE 5TH WORKSHOP ON SIMULATION OF MULTIPHYSICS MULTISCALE SYSTEMS PAGES 1-63

GUEST EDITOR: VALERIA KRZHIZHANOVSKAYA

Preface *vii*

Simulation of Quantum Dot Based Nanodevices for Photovoltaic Applications with Multiscale Models **1**
Alexander I. Fedoseyev, Marek Turowski, Ashok Raman, Qinghui Shao, and Alexander A. Balandin

Multiscale Simulation Models for Transient Radiation Effects with 3D Ionizing Tracks in Semiconductor Nanodevices **9**
Alexander I. Fedoseyev, Marek Turowski, Ashok Raman, Michael L. Alles, and Robert A. Weller

A Multiphysics Model of Myoma Growth **17**
Dominik Szczerba, Bryn A. Lloyd, Michael Bajka, and Gábor Székely

Domain Decomposition Methodology with Robin Interface Matching Conditions for Solving Strongly Coupled Fluid-Structure Problems **29**
François-Xavier Roux, Jean-Didier Garaud

Multiscale Implications of the Inverse Rapid-Energy Deposition Problem **41**
S.G. Lambrakos and J.G. Michopoulos

On the Evolution of Entanglements in Initially Unentangled Polymer Melts **55**
Gopinath Subramanian and Sachin Shanbhag

NUMBER 2

Preface *vii*

Damage Evolution in an Underground Gallery Induced by Drying **65**
B. Pichler, S. Cariou, and L. Dormieux

Blast Analysis of Enclosure Masonry Walls Using Homogenization Approaches **91**
G. Milani and P.B. Lourenço

Tensile Behavior of Cementitious Composite Reinforced with Epoxy Impregnated Multifilament Yarns **115**
M. Konrad and R. Chudoba

Multiscale Model for Temperature Distribution in Hydrating Concrete **135**
V. Šmilauer and T. Krejčí

Assessment of Periodic Homogenization-Based Multiscale Computational Schemes for Quasi-Brittle Structural Failure **153**
B.C.N. Mercatoris and T.J. Massart

Stochastic Modeling of Chaotic Masonry via Mesostructural Characterization **171**
M. Lombardo, J. Zeman, M. Šejnoha, and G. Falsone

NUMBER 3

Preface *vii*

Effects of Sample Geometry on the Uniaxial Tensile Stress State at the Nanoscale **187**
S. Brinckmann, J.-Y. Kim, A. Jennings, and J. R. Greer

A Study on the Collapse of Self-Similar Hardening Behavior of Nanostructures **195**
Y. Gan and Z. Chen

Deformation and Stability of Copper Nanowires under Bending **205**
Y. Zheng, H. Zhang, Z. Chen, and S. Jiang

A Micropillar Compression Simulation by a Multiscale Plastic Model Based on 3-D Discrete Dislocation Dynamics **217**
Z. L. Liu, X. M. Liu, Z. Zhuang, Y. Gao, and X. C. You

Investigation of the Size Effect of Nickel-Base Superalloy Single Crystals Based on Strain Gradient Crystal Plasticity **227**
J. F. Nie, Z. L. Liu, X. M. Liu, X. C. You, and Z. Zhuang

Atomistically Informed Mesoscale Model of Alpha-Helical Protein Domains **237**
J. Bertaud, Z. Qin, and M. J. Buehler

NUMBER 4

Preface *vii*

Modeling of Structure Evolution of Filled Elastomers Under Uniaxial Elongation **251**
B. Lauke and I. A. Morozov

Fast Calculation of Elastic Fields in a Homogeneous Medium with Isolated Heterogeneous Inclusions **263**
S. Kanaun

Atomistic Simulations-Based Understanding of the Mechanism behind the Role of Second-Phase SiC Particles in Fracture Resistance of SiC-Si_3N_4 Nanocomposites **277**
V. Tomar and V. Samvedi

Modeling of Viscoelastic Behavior of Ballistic Fabrics at Low and High Strain Rates **295**
N. V. David, X. –L. Gao, and J. Q. Zheng

Crack-Centered Enrichment for Debonding in Two-Phase Composite Applied to Textile Reinforced Concrete **309**
R. Chudoba, J. Jeřábek, and F. Peiffer

Modeling the Particle Size and Interfacial Hardening Effects in MetalMatrix Composites with Dispersed Particles at Decreasing Microstructural Length Scales **329**
R. K. Abu Al-Rub

A Multiscale Framework for Analyzing Thermo-Viscoelastic Behavior of Fiber Metal Laminates **351**
S. Sawant and A. Muliana

The Stochastic Interface Defects in Composite Materials Subjected to Aging Processes **371**
M. M. Kamiński

NUMBER 5

Microstructure Evolution Modeling during and after Deformation in 304 Austenitic Stainless Steel through Automaton Approach **381**
N. Yazdipour, P. D. Hodgson, and C. H. J. Davies

Hierarchical Multiscale Modeling of Nanotube-Reinforced Polymer Composites **395**
J. Ghanbari and R.. Naghdabadi

Quantum Mechanical Simulations and Experimental Evaluations of the Catalysis Reaction of the Reactions of Epoxy Resins with 1-Imidazole and 1-Dimethylbenzylamin **409**
B. Singh, O. Fritz, A. Simperler, and C. Menke

Solving the 3D Maxwell Equations Near Conical Singularities by a Multiscale Strategy **419**
F. Assous and P. Ciarlet Jr.

Investigating the Effect of Carbon Nanotube Defects on the Column and Shell Buckling of Carbon Nanotube–Polymer Composites Using Multiscale Modeling **431**
A. Montazeri and R. Naghdabadi

Interfacial Microstructures in Martensitic Transitions: From Optical Observations to Mathematical Modeling **445**
H. Seiner, O. Glatz, and M. Landa

On the Multiscale Computation of Defect Driving Forces **457**
S. Ricker, J. Mergheim, and Paul Steinmann

Multiscale Modeling of Solute Bulk Diffusion at Dislocation Cores **475**
D. Zhang and R. C. Picu

NUMBER 6

Preface ***vii***

Elimination of Fast Modes in the Coupled Process of Chemistry and Diffusion in Turbulent Non-Premixed Flames: An Application of the REDIM Approach **487**
D. Roekaerts, B. Merci, B. Naud, and U. Maas

Some Issues Related to the Use of Immersed Boundary Method to Represent Square Articles **509**
M. Pourquie, W.-P. Breugem, B. J. Boersma

On Numerical Solutions of some Diffuse Interface Problems: The Cahn-Hilliard Equation and the Model of Thomas and Windle **523**
F. J. Vermolen, M. Gholami Gharasoo, and P. L. J. Zitha

On Hybrid Simulations of Two-Way Coupled Turbulent Magnetohydrodynamic **545**
S. Kenjeres

Computational Study of Hydrodynamics of a Standard Stirred-Tank Reactor and a Large-Scale Multi-Impeller Fermenter **559**
O. Gunyol and R. F. Mudde

Inverse Shallow Water Flow Modeling Using Model Reduction **577**
M. U. Altaf, A. S. Heemink, M. Verlaan

INDEX to Volume 7 **595**
