NANOMECHANICS SCIENCE & TECHNOLOGY
An International Journal

VOLUME 3

ab initio calculations, 283
adhesion, 99
Al_2O_3, 333
AlN, 333
associates, 125

ballistic conduction, 125
binary mixure, 1
Brillouin zone, 125

carbon nanotubes, 99, 125, 141
ceramics, 141
chemical bond, 51
cluster phase transitions, 167
cluster thermal oscillations, 167
coatings, 353
composite materials, 353
configuration transitions in clusters, 167

dynamic electrorheological characteristics, 239

effective physical and mechanical properties, 141
elastic modulus, 283
elasticity modulus, 99
electrocodeposition, 353
electrophysical properties, 239
electrorheological suspensions, 239
engine oil, 333
environmental effects, 27

fillers, 297
flow curves, 239
fractal structures, 297

gradient thermal conductivity, 141
gradient thermoelasticity, 141

interphase interactions, 99

Knudsen number, 77

lattice Boltzmann method, 77
least squares approach, 77

material properties, 27
microflow, 77
microstructure, 297
mixing efficiency, 1
molecular dynamic simulation, 51
molecular van der Waals clusters, 125
Mössbauer spectroscopy, 155, 341
multiferroic substance, 341
multiferroic, 155
MWCNT, 27

nanocomposites, 27, 297
nanodisplacement, 155, 341
nanofluid, 311, 333
nanoparticles, 239, 283, 353
net charge density, 1

optical properties, 311

phase coexistence, 167
polyimides, 239
polymer composite, 99
porosity, 141
potential energy surface, 167

quantum dots, 51

reinforcement effects, 141
ring-like structures, 99
rubbers, 297

simulation of molecular dynamics, 193, 211

solar collectors, 311
solar direct absorption, 311
synergetics, 341

Taylor-series expansion, 77
thermal conductivity, 333
tight binding approach, 125
time periodic velocity, 1
titanium carbide, 283
transient hot wire method, 333
tungsten carbide, 283

viscosity, 333

whisker growth, 193, 211
